20 Important Points about Educational Acceleration

- 1. Acceleration is the most effective academic intervention for gifted children.
- 2. For bright students, acceleration results in both long-term and short-term beneficial effects, academically, psychologically, and socially.
- 3. Acceleration is a very low-cost intervention for addressing the needs of gifted students.
- 4. Gifted children tend to be socially and emotionally more mature than their age-mates; therefore, for many bright students, acceleration provides a better personal maturity match.
- 5. When bright students are presented with curriculum developed for age-peers, they can become frustrated and disengaged from learning. Advanced curriculum in core subject matter is essential to challenge them.
- 6. Testing, especially above-level testing (using tests developed for older students), is highly effective in identifying students who would benefit from acceleration.
- 7. The K-12 Common Core State Standards, which correspond to math and reading, and the Next Generation Science Standards, which focus on K-12 science, raise academic expectations for most students; however, for highly capable students, these standards do not eliminate the need for accelerative options.
- 8. The twenty types of acceleration available to bright students fall into two broad categories: grade-based acceleration, which shortens the number of years a student spends in the K–12 system, and subject-based acceleration, which allows for advanced content earlier than customary.
- 9. Entering school early is an excellent option for some gifted students, both academically and socially.
- 10. Early entrance to college is effective, both academically and socially, especially when students are part of a cohort of early entrants.

 This option results in both short-term and long-term academic success, leading to long-term occupational and personal satisfaction.
- 11. Advanced Placement (AP) is the most available large-scale option for bright students who want to take college-level courses in high school.
- 12. State residential STEM schools use accelerated approaches that include early admission, AP, International Baccalaureate (IB), and various forms of personalized learning.
- 13. High-ability students who are economically vulnerable achieve considerably less without support for their abilities than economically secure students.
- 14. Educators need to ensure that options for acceleration are available for students at all stages of the learning process.
- 15. Policy on acceleration at state and local levels can facilitate the effective use of the process and promote change. To encourage a major change in America's perceptions of educational acceleration, we need to use legislation, the courts, administrative rules, and professional initiatives.
- Effective implementation of accelerative options for gifted students with disabilities is necessary for their academic advancement and social and emotional well-being.
- 17. It is important for educators, parents, and students to be fully involved in the decision-making process about an individual student's acceleration. The *lowa Acceleration Scale* is an effective instrument for helping schools through the process.
- 18. The few problems that have been experienced with acceleration have stemmed from inadequate planning and insufficient preparation on the part of educators or parents.
- 19. Educational equity does not mean educational sameness; rather, equity respects individual differences in readiness to learn and recognizes the value of each student.
- 20. The key questions for educators are: what type(s) of acceleration does the gifted learner need and when is it optimal to implement the intervention?

For more information on the research that informs these points, see Volume 2 of *A Nation Empowered* (www.nationempowered.org), or Volumes I and II of *A Nation Deceived* (www.nationdeceived.org).
